Mortgage Insurance allows you to purchase your home for less than the 20% down payment usually required without mortgage insurance. We can offer you several different products that allow you to obtain a loan that allows you to borrow more than 80% of the property value. You can choose mortgage insurance that requires a monthly payment along with your mortgage payment. You can choose borrower paid or lender paid single payment mortgage insurance. We also have some very interesting options that allow you to structure your loan origination so that you can receive a loan for more than 80% of the value of the property. In many cases, the loan parameters can be structured so that your monthly payment is less than that required for monthly paid mortgage insurance. Your transaction can be structured so that you receive the prevailing interest rate (currently 6.0%), or you can receive a net cash disbursement at closing and pay a higher than prevailing rate (currently 6.75%). In some cases, you can receive tax advantages from structuring the transaction in this way. You can use the form below to enter your transaction information and information relating to your tax status, and receive information describing the effect of the various loan origination options available.
